

Jesse Opitz  
Normalization Three

Function Dependencies:

ZIP → State, City

PID → FName, LName, PhoneNum, ADD1, ADD2

PID → Age, Number

CID → NumYears

TID → TeamName, NumPlayers, NumCoaches

This database is in third normal form because there are no partial key dependencies and the primary keys are the only candidate keys. Furthermore, this is in Boyce-Codd normal form because there are no interior transitive dependencies.
